Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/624,454

Applicant(s)

CASEY ET AL.

Examiner

VAN KIM T. NGUYEN

Art Unit

2152

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 July 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-46 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-46 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

1. This Office Action is responsive to communications filed on December 20, 2007. Claims 1-46 are pending in the application.

Response to Arguments

2. Applicant's arguments, see page 10, filed December 20, 2007, with respect to the rejections of claims 1-8, 12, 17, 21-25, 27, 32, 35-37, 39 and 44 under 35 U.S.C. 102(e) have been fully considered and are not persuasive.

Claim Rejections - 35 USC § 102

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. Claims 1-8, 12, 17, 21, 25, 27, 32, 35-37, 39 and 44 are rejected under 35 U.S.C. 102(e) as being anticipated by Moore (US 7,035,270).

Regarding claims 1, 22 and 35, Moore discloses a network interface device (30) comprising:

an isolation device adapted to isolate a transport medium internal to a customer premises from a transport medium external to the customer premises such that operational changes to one of the internal and external transport media do not affect the other of the internal and external transport media (e.g., home network interface 32 containing appropriate physical layers and interface, e.g., antenna, RJ-11 connection, power system connection that operational changes to

the internal and external transport media do not affect the other of the internal and external transport media; col. 3; lines 44-47);

a first interface coupled with the isolation device and adapted to communicate with the external transport medium, wherein the external transport medium is in communication with a distribution point (interface 38, 42, 62; col. 3: lines 53-67);

a second interface coupled with the isolation device and adapted to communicate with the internal transport medium (main bus 34; col. 3: lines 44-47); and

a microserver disposed external to the customer premises and coupled with the first and second interfaces, wherein the microserver is adapted to receive telecommunication information from the external transport medium and includes software for implementing at least one of an authentication microserver, a file-transfer microserver, a dynamic host configuration protocol microserver, or a webserver microserver to function over the internal transport medium by processing the received telecommunication information (HNG 30 controls access to MSO-based services which includes audio/video entertainment and Internet access and obtains NMS/EMS authorization and authentication information to allow subscribers access to web services, inherently by implementing at least a webserver or an authentication server; col. 5: lines 36 –col. 6: line 24).

Regarding claim 2, Moore also discloses the isolation device and microserver are disposed within a common housing (Figure 2).

Regarding claim 3, Moore also discloses the common housing (30) is disposed on an exterior wall of the customer premises (Figure 3).

Regarding claims 4 and 23, Moore also discloses an addressable application device coupled with the microserver, wherein the addressable application device is adapted to receive the processed telecommunication information and to execute a defined application as an aid to implementing the microserver functions over the internal transport medium (DSP 50 emulates PCM highway to communicate with SLIC 36 and in-home network interface 32 to distribute telephone signals and other signals throughout the home network; col. 4: lines 13-25).

Regarding claim 5, Moore also discloses the addressable application device is disposed external to the customer premises (Figure 3).

Regarding claim 6, Moore also discloses the isolation device, microserver, and addressable application device are disposed within a common housing (Figure 2).

Regarding claims 7, 24 and 36, Moore also discloses the authentication microserver is adapted to verify that the microserver functions are authorized for the customer premises (col. 6: lines 1-6).

Regarding claims 8, 25 and 37, Moore also discloses the file-transfer microserver is adapted to transfer an electronic file of information to or from the network interface device

(retrieve configuration files and upload the files to a specific device for configuration or other purposes; col. 5: lines 64-67).

Regarding claims 12, 27 and 39, Moore also discloses the microserver comprises a code-processing microserver adapted to receive code and process the code for use by another component of the network interface device (conversion functionality needed to convert digital signal from DSP 50 into analog telephone is implemented in dongle 58; col. 4: lines 21-40).

Regarding claims 17, 32 and 44, Moore also discloses the microserver comprises a wireless microserver adapted to provide an interface between wireless communications within the customer premises to the external transport medium (RF connector 44 or antenna 62; Figure 2).

Regarding claim 21, Moore also discloses upgradeable firmware that supports the microserver (home network interface 32 can be in the form of a plug-in card connected to main bus 34; col. 3: lines 44-47. Thus, if new and improved interface card is available, the system can be upgraded).

5. Claims 9-11, 13-16, 18-20, 26, 28, 30, 33-34, 38, 40, 42 and 45-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moore as applied to claim 1 above, in view of Rakib (US 6,970,127).

Regarding claims 9-11, 26 and 38, Moore discloses substantially all the claimed limitations, except a dynamic host configuration protocol microserver adapted to manage an internet-protocol address assignment to a device coupled with the internal transport medium.

As shown in Figure 8, Rakib teaches a home gateway comprising a DHCP server 320 assigns addresses to clients on the LAN and in the gateway (col. 27: lines 16-17; Figure 8). Obviously, internet-protocol address assignment can either be public or private address assignment.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply Rakib's method of using a DHCP server in Moore's system in order to access, control and monitor the gateway remotely.

Regarding claims 13, 28 and 40, Moore-Rakib also teaches the webserver microserver adapted to render a display of incoming web page information suitable for presentation with a web-browser enabled device (a web server application 340 controls host computer 308 to serve web pages to browsers on the internet (Rakib; col. 31: lines 8-10).

Regarding claims 15, 30 and 42, Moore-Rakib also teaches the microserver comprises an instant-messenger microserver adapted to provide instant-messaging functionality over the internal transport medium (Rakib; col. 23: lines 13-17).

Regarding claim 16, Rakib also teaches the microserver comprises:

a webserver microserver adapted to render a display of web-page information suitable for presentation with a web-browser enabled device (Rabik; col. 31: lines 25-38); and

an advertising microserver adapted to overlay an advertisement over the display of web-page information (Rabik; col. 22: lines 63-67)

Regarding claims 18, 33 and 45, Moore-Rakib also teaches the microserver comprises an RF power-level microserver adapted to monitor an RF power level of telecommunication information received at the first interface (e.g., rate shaping circuitry 11 to change the data rate of data transmitted to or received from headend 12 over transmission medium 12; Rabik; col. 6: lines 33-60).

Regarding claim 19, Moore-Rakib also teaches the microserver comprises a test-access microserver adapted to verify proper functioning of another component of the network interface device (gateway 12 has intelligent hub management software that monitors traffic conditions and does whatever management and rate shaping is necessary to most efficiently use the LAN resources 28 and broadband 14 that are available; Rabik; col. 7: lines 63-67).

Regarding claims 20, 34 and 46, Moore-Rakib also teaches a webserver microserver coupled with the microserver and adapted to provide a customer-based graphical user interface for implementing software configuration changes of the microserver (Moore; col. 5: lines 60-67 and Rabik; col. 31: lines 25-38).

6. Claims 14, 29 and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moore as applied to claim 1 above, in view of Johnson et al (US 5,694,616).

Regarding claim 14, Moore discloses substantially all the claimed limitations, except initiating an email alert in response to receipt of an email at an email account.

Johnson et al teaches initiating an alert in response to receipt of an email message at an email account (col. 3: lines 16-18).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply Johnson's method of notifying the receiving of email in Moore's system in order to provide receivers with a friendly user email product that alerts users with receiving messages.

Conclusion

7. Applicant's amendment necessitated the new grounds of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to VAN KIM T. NGUYEN whose telephone number is (571)272-3073. The examiner can normally be reached on 8:00 AM - 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bunjob Jaroenchonwanit can be reached on 571-272-3913. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
